How underwater living could soon be a reality

Fifty years after Jacques Cousteau's television programmes sparked our grandparents' imaginations, the idea, if not quite the practice, of underwater living is coming back into fashion with an ambitious and alluring vision for Katafinga Island in Fiji called the Poseidon Undersea Resort. The images circulating on the internet of luxurious rooms surrounded by shoals of exotic fish and colourful corals suggest that this is an established resort. However, this is not the case and the ongoing delays which have impeded the project attest to the specific issues encountered during the construction of an underwater environment.

The research and testing undertaken for the Poseidon resort have prompted L. Bruce Jones, the designer, to begin marketing an underwater house or the "H2Ome", which is billed on the company's website as "the most technologically advanced undersea residence ever designed." The plans show a disk-like structure, 20 metres in diameter, which is suspended above the seabed on steel legs and has a tube umbilically connecting it to the surface. The biggest obstacle to underwater living to date has been the difference in pressure: all of the habitats constructed over the last fifty years have been at ambient pressure. Under water, the pressure is much greater, which can cause gases in the bloodstream to dissolve. This in turn sometimes results in the feared condition known as the bends, which can cause intense pain and even death. The H2Ome is a real advance, however, as the interior pressure is identical to that on land. Unlike the other experiments, therefore, it presents for the first time a viable aquatic living environment.

Like space, the underwater world is an alien and potentially deadly environment for humans, and undersea structures can be problematic to build. "We manufacture in a dry dock," explained Jones, "after which the completed structures are floated out and sunk onto the ocean bed using a semi-submersible. We then build legs so that the structure stands above the seal floor: this is done for

A journal has invited its readers to contribute to a series of articles on new technology and personal freedom. You decide to send an article describing the effects that new technology, such as the Internet, social networking sites and mobile phones, has had on people's lives and explaining whether these changes have led to more or less freedom. You should also evaluate how positive the changes are for society.

Write your article. **Write 200-250 words.**

Nowadays, we live in a world where technology has a giant impact on our lives. And all in all we should meet its bad starts and try to figure out. So, how technologies can affect our lives and how can we survive in those times? 45

That is not a secret that all of us are people of industrial era. So, firstly, artificial intelligence rules many kinds of profession. But sometimes it's not good at all. ³⁰ For example, in America there is a big scandal connected with film directors, implebers and writers only because of AI. It will lead to lag behind in culture and it would be a lot of Twitter argues. Secondly, we have a ~~lot~~ smart houses. 43

As for me, it's a good thing to organisation and having neat house. Also, it's extremely essential to have a clean house because you can see a good vision of place. ⁵¹ Thirdly, The Internet. It can provide ~~the~~ impossible freedom because you can find everything in the Internet. For example, children can watch ~~few~~ videos connected with theme of their lesson for better understanding. 32 And the last thing is mobile phones. They are so important nowadays because it's industrial century and there are everything in your phone: your habits, hobby, alarms and maybe your chats with friends. 33

In a conclusion I want to say that every transformations are necessary because it helps our world to grow and improve. Of course, not every changes are positive, but maybe some of them would lead to big achievement one day. 40
